WHITE LAKE
PRESERVATION PROJECT

White Lake: ours to preserve

Tools and techniques for successful
local environmental monitoring

In this free webinar, Conrad Grégoire will give you a tour of White Lake and show you how and why water quality has dramatically changed over the past few years. The invasive zebra mussel has altered the way phosphorus is cycled in the lake with dramatic effect. He will discuss how outreach to the lake community aims to educate and encourage individual responsibility for the health of White Lake, and he will show you how to use these techniques to engage your own community.

Saturday, April 17th at 10am EST

Registration: watersheds.ca/freshwater-stewardship

Conrad Grégoire, PhD (left) and Dave Overholt, BA (right) are both Environment Volunteers for the White Lake Property Owners Association and the White Lake Preservation Project
